Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

1. Examiner regrets the untimely reopening of prosecution.
2. Applicant's amendment and accompanying remarks filed June 16, 2005 have been acknowledged.
3. The rejection of claims 129-200 under the judicially created doctrine of double-patenting rejection as being unpatentable over U.S. Patent Application Number 10/026,604 is withdrawn due to applicant's argument.

Claim Objections

4. Claims 177-184 are objected to because of the following informalities: The term "porphryin" is misspelled. Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 129-200 are rejected under 35 U.S.C. 102(e) as being anticipated by Aziz et al., U.S. Pre Grant Publication 2002/0145380.

The Aziz reference discloses an organic light emitting device comprising a first electrode (an anode); a light emitting region comprising an organic luminescent material and a second electrode (a cathode) (see paragraph 0025). Additionally, the reference discloses that the light-emitting region is situated on and in contact with the anode. The embodiments of the Aziz reference include the light-emitting region comprising an organic luminescent material as a dopant (see paragraph 0045). Also, the reference discloses that the light-emitting region comprises hole transport and electron transport materials as the organic luminescent material (see paragraph 0046). Paragraph 0047 of the reference discloses that the light emitting region can further comprise at least one of a hole transport region adjacent to the anode and an electron transport region adjacent to the cathode. The reference discloses that the light-emitting region comprises an organic luminescent material that can be doped; a hole transporting region and an electron transporting region. Paragraph 0070 of the Aziz reference discloses that the light-emitting region has thickness of typically 20 nm to about 200 nm. Also, Aziz discloses that the organic light-emitting device can be used in various types of displays such as computer monitors, televisions and other electronic devices (see paragraph 0089). In paragraph 0047 of the reference, it is disclosed that the hole transport materials and electron transport materials can be used as the organic luminescent material. Additionally, the reference discloses hole transport materials, electron transport materials, fluorescent materials and phosphorescent materials used as dopants for the organic luminescent material in the light-emitting region (see paragraph 0061-0069). The reference discloses the use of perylene, rubene, aromatic tertiary amines and

oxadiazole compounds. Paragraph 0062 of the reference discloses that the dopant is present in the amount of 0.01 weight percent to about 25 weight percent.

Response to Arguments

7. Applicant's arguments with respect to claims 129-200 have been considered but are moot in view of the new ground(s) of rejection.
